

CorrZe™

TARGETING CORROSION AT ITS CORE

200+ YEARS OF EXPERIENCE IN COATINGS AND SURFACE PREPARATION

Blast Abrasive Supplies is proud to provide products such as Corr-Ze™ that eliminate **everything** that promotes flash rust and under film corrosion. Let our experts help you significantly improve coating adhesion while preventing flash rust. Our team delivers unparalleled technical expertise, results, and savings.

BENEFITS OF THE CorrZe™ PRODUCT LINE

EASY TO USE

Corr-Ze™ 100 is a "single step" water additive that is incorporated into the blast stream of Ultra High-Pressure Water ("UHP"), Wet Abrasive, or applied after using conventional dry abrasive systems.

IMPROVES COATING PERFORMANCE

Corr-Ze™ products provide higher bond strength, which extends coating life without leaving a film on the substrate.

LIMITS WEATHER IMPACT

Corr-Ze™ 100 cleans the substrate, leaving it free of contaminants, preventing flash rust for extended periods depending on environmental conditions.

CARBON FOOTPRINT REDUCTION

Non-toxic, environmentally friendly and approved for direct runoff by the EPA & DEQ into the waters off the coast of California and the Gulf of Mexico. Eliminating rework reduces equipment run time (UHP, Air compressors) supply boat runs, aggregate consumption, and paint material waste positively impacts carbon emissions.

- Not an inhibitor or a film former
- Improves adhesion

- Significantly prevents flash rust
- Non-flammable

- Water-based
- Fast-drying
- Non-toxic

- Biodegradable
- Reduce need to coat immediately

Reduce costly downtime, rework, and maintenance

Reduce project costs by up to 50%

Extend coating service life exponentially

The only rust prevention surface prep that won't damage the Thompson Valves in WVB or wet ends in UHP

No other team can offer you our expertise or these results and savings!
